

Pages and blogs

Pages and blog posts allow you to capture and share information in Confluence.

Whether it's taking down some quick [notes from a meeting](#), writing a [requirements page](#), or letting your teammates know about the company's latest marketing push – you can create it as a Confluence page or blog post.

[Pages](#) are great for when you want the information to last and evolve over time. If it's a point-in-time update or one-time communication then a [blog post](#) is the way to go. These aren't hard-and-fast rules; they're just pointers to give you a place to start.

Each Confluence space, including your personal space, allows you to create pages in it, and has its own blog where you can create posts. If you're not sure what a space is, or what you can do with spaces, check out our page on [Spaces](#).

Take a look at the below pages to learn more about pages and blog posts in Confluence.

Create and Edit Pages

Create a page

You can create a page from anywhere in Confluence; just select **Create** in the header and you're ready to go. Pages are the place to capture all your important (and unimportant) information; start with a blank page and add rich text, [tasks](#), [images](#), [macros](#) and [links](#), or use one of the useful [blueprints](#) to capture [meeting notes](#), [decisions](#), and more.

On this page:

- [Create a page](#)
- [Edit a page](#)
- [Edit together](#)
- [Collaborate or restrict](#)
- [Organize and move](#)
- [Estimate reading time](#)
- [Other page actions](#)
 - [Notes](#)

- ✓ If you want to quickly create a blank page, hit the **Create** button in the header; if you want to create a page from a template, hit the **Create from template** button.

1. **Create blank page**
2. **Create from template**

1. **Select space:** choose the space where you'll create the content.
2. **Page templates:** create a page from a template or create other types of content.
3. **Parent page:** your page will be a child of this page.

Once you decide on a blank page or blueprint, you'll be taken straight into the [Confluence editor](#). The editor is where you'll name or [rename](#) your page, add the content, and format it to look great. When you've added some content, select > **Preview** to take a peek at what your finished page will look like, and **Publish** when you're ready to make it appear in the space.

1. **Confluence header:** create blank pages, pages from templates and visit spaces or your profile.
2. **Space sidebar:** access pages, blogs and administer the space.
3. **Page tools:** edit or share the page, watch it to get updates and perform more actions.
4. **Page details:** check who's the author of the page, when it was last edited, and its read time.

✓ Another useful way to create a page is to use the [Create from Template Macro](#). This macro allows you to choose a page template, and adds a button to the page allowing one-click page creation. If you want others to create pages using this template, this is a great option.

Edit a page

After you save you'll see the page in a "view" mode. You can re-enter the editor any time by selecting **Edit** or pressing **E** on your keyboard.

To keep track of your changes over time, you can publish the page with a version comment. When you are done editing, enter your comment in the **What did you change?** field in the lower-left corner of the screen, and then select **Save**.

Edit together

Need input from your team members? Multiple people can edit your page at the same time.

Hit the **Invite** button in the editor and either grab the link, or enter some people or groups to invite by email (they need the appropriate Confluence and space permissions of course).

See [Collaborative editing](#) for all the ins and outs.

Collaborate or restrict

Once you've created a page, you can decide if you want to keep it private, using [restrictions](#), or collaborate on it with others using [@mentions](#), [sharing](#), and [comments](#).

Organize and move

You can also organize pages in a hierarchy, with child and/or parent pages for closely related content. When you navigate to a Confluence page and select the **Create** button in the header, the page you're creating will by default be a child of the page you're viewing. Have as many child pages and levels in the hierarchy as you need to, and [move pages](#) if you want to change their location.

If you want to view all pages in a Confluence space, select **Pages** in the sidebar.

 Each time you create a page, you're creating it in a [space](#) . Spaces are containers used to contain pages with related content, so you can set them up for each team in your organization, for projects, a combination of both, or for any reason you want to group pages together. See [Spaces](#) for more information.

Estimate reading time

Below the title of a Confluence page, you'll find page information, including the estimated time to read its contents. This is based on the average reading speed of 265 words per minute, so it might take you less or more time than estimated. The word count includes words inside tables, and adds extra time for images (starting with 12 seconds for the first image). It cannot count content inside macros. The read time is displayed in minutes, and is not shown while you're editing a page.

Other page actions

- [Copy](#) a page and its child pages
- [Delete](#) a page or remove a specific version of a page
- Monitor page updates and other activity through [page notifications](#)
- View [page history](#), and manage and compare versions of a page
- [Search](#) page content, including attachments
- Export pages to [Word](#), [PDF](#), [HTML](#) or [XML](#)
- [Like](#) a page

 We recommend you don't use special characters in page or attachment names, as the page or attachment may not be found by Confluence search, and may cause some Confluence functions to behave unexpectedly.

 If you rename a page, Confluence will automatically update all relative links to the page, except in some [macros](#) . Links from external sites will be broken, unless they use the permanent URL. See [Links](#) for more information.

Notes

You may experience problems saving extremely large pages. Confluence can accept approximately 5mb of content (not including attached files) which is roughly equivalent to 800,000 words. If you do experience errors that indicate the page is too large to save, you should break up the page into several smaller pages.

Blog posts

Blog posts are an easy way to share announcements, journal entries or status reports. Blog posts are also sorted by publication date and do not appear in the page hierarchy. This means that they are best suited for timely information. Others can join in by [commenting on](#) or [liking](#) your blog post and, if you get enough of either, your post might make it to the popular feed on the [dashboard](#)!

Each [space](#) in Confluence, including your [personal space](#), has its own blog. To view a space's blog, go to a space and select **Blog** in the sidebar. You'll see a list of the latest blog posts. To see earlier posts, use the navigation area in the sidebar.

Prerequisites

To create blog posts, you need the 'Add Blog' permission. See [Space Permissions](#).

To move blog posts, you need the 'Delete blog' permission in the space the post is in, and 'Add blog' permission in the destination space.

Create a blog post

To create a blog post, you can either use the **Blog post** template from the **Create** *** menu, or create a page and convert it to a blog post after it's published. The second option gives you the flexibility to use [templates](#) for your blog posts.

Templates are only available for pages, so to use one for a blog post, first create a page from a template and then convert it to a blog post.

To create a blog post from the Create menu:

1. Go to the space where you want to create your blog post.
2. Select **More options** *** next to the **Create** button in the Confluence header. From the available templates, select **Blog post**.
3. Add your content and select **Publish**.

You can create blog posts from the Dashboard, but you'll need to make sure you choose the space it's going to appear in in the create dialog.

To convert a page to a blog post:

 You can only convert published pages.

1. Create a Confluence page. You can create a blank page or use any template available under the **More options** *** menu in the Confluence header.
2. Add your content and select **Publish**.
3. After the page is published, go to the **More options** *** menu and select **Convert to blog post**.

 When you convert a page with children into a blog post, child pages move to the parent's original position in the structure. Any restrictions the child pages inherited from the parent page are removed once the parent is converted.

Blog posts can be attractive and engaging in the same way a page can be, so go ahead and add images, YouTube clips, and tables to your post to really grab your audience's attention.

Move a blog post

On this page:

- [Create a blog post](#)
- [Restrict a blog post](#)
- [Delete a blog post](#)
- [Export a blog post](#)

Related pages:

- [Subscribe to RSS Feeds within Confluence](#)
- [Blog Posts Macro](#)
- [Collaboration](#)
- [Export Content to Word, PDF, HTML and XML](#)

If you create a blog post in the wrong space, or want to reorganize your spaces, you can move an individual blog post to another space.

To move a blog post:

1. Go to the post and select **More options** **More options** ... > **Move**.
2. Select the new destination space.

Restrict a blog post

You can restrict a blog post so that it is only available to specific users or groups. Blog post restrictions work in the same way as [page restrictions](#).

To restrict a blog post prior to publishing it, select the **Unrestricted**  button in the page tools and apply your restrictions.

To restrict a blog post after publishing, select **More options** ... > **Restrictions** and apply your restrictions.

Notes:

- Notifications are sent at the point a blog post is created - removing restrictions does not trigger a new notification.
- As a blog post has no parent, restrictions aren't inherited.

Delete a blog post

To delete a blog post, select **More options** ... > **Delete**. Deleting a blog post follows the same rules as [deleting a page](#).

Export a blog post

You can export individual blog posts to PDF. This is useful, for example, if you want to email an internal blog post to people outside your organization.

See [Export Content to Word, PDF, HTML and XML](#) for more information on exporting blog posts to PDF.

The Editor

The Confluence editor is what you'll use to create and edit Confluence pages, blog posts, and comments. You can enter content as you would in a Word document, apply formatting, and embed other content and files on the page.

Note: To edit a page, you need the 'Add Pages' permission for the space. See [space permissions](#). Someone may also apply [page restrictions](#) that prevent you from editing the page.

Edit a page or blog post

You'll be taken to the editor whenever you create a new [page or blog post](#), or add a [comment](#). To edit an existing page or blog post, select **Edit** at the top of a page or press **E** on your keyboard.

Confluence automatically saves changes as you type. Changes are only visible when viewing the page after you publish or update. See [Collaborative editing](#) for more information on how this works.

On this page:

- [Edit a page or blog post](#)
- [The editor](#)
- [Editor toolbar](#)
- [Emoji menu](#)
- [Insert menu](#)
- [Restrictions, labels, and notifications](#)
- [Things to help you work faster](#)
- [Find and replace text](#)
- [Invite people to edit with you](#)
- [Record change comments and notify watchers](#)

Related pages:

- [Tables](#)

- [Links](#)
- [Symbols, emojis and special characters](#)

The editor

The editor allows you to enter or change the title of your page; insert content including text, images, and links; and format your content using the toolbar.

If you're renaming your page, there are [some things you should take into account](#).

1. **Page content:** add your page title and body text.
2. **Page tools:** add labels, or restrict the page.
3. **Insert:** add files, links, images, tables and macros
4. **Notify:** notify others and leave a comment when you change a page.
5. **Preview or revert:** preview your page, view changes since last published, or revert back to last published version (or delete the draft page, if it has never been published).
6. **Word count:** check how many words and characters the page contains.

Editor toolbar

The editor toolbar is where you format your [page layout](#) and text, and add [links](#), [tables](#), [images](#), [attachments](#) and [macros](#). You can also perform a [find and replace](#), or get help using the editor by choosing the help icon .

Emoji menu

Use the emoji menu to preview, search for, and insert an [emoji or symbol](#) into your page. You can see the emoji's keyboard shortcut in the preview bar at the bottom of the emoji menu. Type `:` (colon) to open the emoji menu.

Insert menu

The **Insert** menu is particularly useful. Use the **Insert** menu to include any of the following content types on your page:

- An [image](#)
- A link to another Confluence page or external URL, or a [link to an attachment or image](#)
- A horizontal line
- A [macro](#) (choose a specific macro, or **Other Macros**, from the **Insert** menu)

You can also use keyboard shortcuts to insert links, images, and macros. Try out the shortcuts listed below:

- Type `[` (square bracket) to insert a link.
- Type `!` (exclamation mark) to insert an image or other media.
- Type `{` (curly bracket) or a `/` (forward slash) to insert a macro.

Typing any of the above shortcuts will trigger the autocomplete functionality, prompting you with a list of suggestions to finish off the entry.

Another handy shortcut is to type `---` (three dashes) to insert a Horizontal rule macro. For more shortcuts, click the help icon  on the editor toolbar.

Restrictions, labels, and notifications

When editing a page, you may want to set [restrictions](#) on who can view or edit the page, or add [labels](#) to the page to make it easily searchable.

Once you're ready to save, you can enter [change comments](#) to let others know what you've changed, and, if you like, [send an email notification](#) to anyone watching the page.

Things to help you work faster

Auto-formatting

You can type [Confluence wiki markup](#) directly into the editor to have Confluence auto-format your text as you type. To learn more, choose help icon  in the toolbar, then choose **Editor Autoformatting**.

Autoconvert for pasted links

When you paste certain URLs into Confluence, the editor will analyze what you're pasting and automatically convert it into something that will display well in Confluence. Examples include:

- YouTube videos
- Jira issue queries
- Google Maps
- Confluence pages, blog posts, comments, user statuses, user profiles.
- Shared screenshot links from Skitch
- And more.

Count words and characters on your page

Word count is part of the editor, so when editing a page you can see the count in the toolbar at the bottom of your page or blog post. Use the drop-down menu to switch between displaying the word count and the character count.

As you type, the counter will update characters or words. You can also select a section of your page to see how many words or characters the section contains.

When counting characters, the counter includes spaces in the total count. When counting words, the counter treats hyphenated words as one word.

Drag-and-drop for external images and files

You can drag files, like images, multimedia, Office files and PDFs, from your computer and drop them directly into the editor. The contents of the file will be embedded into the page or blog post.

Drag-and-drop within the editor

In the editor panel, you can drag an image or a macro from one location to another on the page. Hover your cursor over the image or the macro placeholder and your cursor changes to a drag-and-drop icon. Click the image or macro and drag it to a new location.

Keyboard shortcuts

To view the available [keyboard shortcuts](#), choose the help icon  in the editor toolbar.

Find and replace text

Click the  icon on the toolbar, or use the keyboard shortcut **Ctrl+F** (Windows) or **Cmd+F** (Mac OS).

Search matches are highlighted in yellow. You can step through the results one by one, replace the matching text strings one by one, or replace all matching strings at once. Find and replace works only within the current page.

Invite people to edit with you

Speed up your draft and review cycles and get input from the right people by inviting them to edit the page with you. The page does not need to be published.

Hit the  button in the editor and either grab the link, or add people, groups or email addresses to invite, just like [sharing a page](#).

Sharing or inviting someone to edit a page or blog post does not automatically grant any permissions - they will still need the appropriate Confluence permissions to access Confluence and view or edit the page.

Up to 12 people can edit the same page at the same time (your administrator can change this limit).

Record change comments and notify watchers

When you finish editing a page, you can add a comment to let others know what you changed. Type a short message in the change comments field in the footer. The comment will be visible in the [page history](#).

If you want to send a notification to people [watching the page](#), select **Notify watchers**. The change comment will be included in the notification email.

The **Notify watchers** checkbox remembers your last selection for each page, so if you choose not to notify people, the checkbox will be deselected for you next time you edit that page.

☒ Notify watchers ...
